

Draughting

The ability to convey an idea or technical details in the form of pictures to anyone who can read a drawing. Almost everything you have seen today has originated from a drawing, your desk, the building you work in. With out drawings how would we communicate to one another what we want? Draughtsmen and draughtswomen are great communicators of what we want, and at capital draughting drawing is our first language.

We aim to produce the most simplest, practical solution to an idea so that anyone can understand what we are trying to say. The links below are the fields we specialize in and if there is something you want which you can not find on this site please don't hesitate to call, we still might be able to help.

All draughting is conducted on Autocad 2008, and can be printed out on paper sizes from A4-A0 monochrome and colour. Some of the drawing work these days only get printed of on paper at the final stage for construction, E-Mails and the Internet now means we can draw steel or mechanical components for a company in New Zealand, all the architects and engineers drawings are on electronic format and autocad is world wide and fully adaptable, the world likes our British standards too, which makes a UK company more appealing.

Click on the below to view examples of our draughting projects:

For more information or quotations on the above. Please feel free to give us a call on 01245 495 822 or email us [here](mailto:info@capitaldraughting.com).
